

TASK 02 – Prompting for Creativity

Prompt Engineering Internship

In this task, creative prompts are designed to explore how prompt structure, tone, examples, and persona influence the creativity of an AI model. Few-shot prompting is used by providing examples to guide the expected style of the output. Multiple prompt variations are tested and compared based on tone, creativity, and level of detail.

Topic 1: Startup Ideas

Type	Content
Basic Prompt	Give me some startup ideas.
Output	1. Online tutoring platform. 2. Food delivery service. 3. Fitness application. 4. E-commerce website. 5. Digital marketing agency.
Creative Prompt	Act as a creative startup strategist. Generate 5 innovative startup ideas for college students in India. Each idea should solve a real-world problem and include the startup name, problem solved, proposed solution, target users, and one unique feature . Keep the ideas practical, affordable, and suitable for a student entrepreneur. Use an energetic and inspiring tone.
Output	1. StudySync – A platform that connects students with peer mentors for difficult subjects. ○ Problem: Students often struggle to find affordable academic help. ○ Solution: Students can book short peer-learning sessions. ○ Target Users: College students.

	○ Unique Feature: AI matches students with mentors based on subject and learning style. 2. GreenBite – A service that helps college canteens reduce food waste by offering discounted surplus meals. ○ Problem: Large amounts of prepared food are wasted daily. ○ Solution: Students can purchase safe surplus food at lower prices. ○ Target Users: Students and college canteens. ○ Unique Feature: Real-time surplus food alerts. 3. SkillSwap – A platform where students exchange skills instead of paying money. ○ Problem: Students want to learn new skills but may not afford courses. ○ Solution: Users teach one skill and learn another in return. ○ Target Users: College students. ○ Unique Feature: Skill-credit points for every session.
--	---

Analysis: The basic prompt produces common and predictable startup ideas. The creative prompt provides a specific role, target audience, problem-solving requirement, output structure, and tone. These instructions encourage the model to generate more relevant, detailed, and practical ideas.

Topic 2: Short Story

Type	Content
Basic Prompt	Write a story about a student.
Output	A student worked hard to achieve their goals. They faced many challenges but continued learning and eventually succeeded. The story teaches that hard work and determination can help people achieve their dreams.

Creative Prompt	Act as a young-adult fiction writer. Write a 150-word story about a college student who discovers that an old notebook can predict one event from the next day. Use a mysterious but hopeful tone. Include a surprising ending and simple dialogue. Style example: "The clock stopped at midnight. Aarav opened the notebook and found tomorrow's date already written on the first page." Follow a similar suspenseful style without copying the example.
Output	At 11:58 p.m., Meera found an old notebook beneath a pile of textbooks in the college library. On its first page, tomorrow's date was written in faded ink. Below it were three words: " Do not leave. " The next morning, Meera laughed at herself and went to class. During lunch, her best friend asked, "Why are you looking so worried?" Before Meera could answer, the lights suddenly went out. A loud crash came from the laboratory. Everyone rushed outside. Meera stopped. She remembered the notebook. She opened it again. A new sentence had appeared: " You saved them. " She looked toward the laboratory and realized the notebook had never been predicting the future. It had been giving her chances to change it.

Analysis: The basic prompt creates a simple motivational story with little detail. The creative prompt establishes a writer persona, genre, word limit, tone, plot requirement, dialogue, and a few-shot style example. These constraints guide the model toward a more imaginative, suspenseful, and structured story.

Topic 3: Advertisement Copy

Type	Content
Basic Prompt	Write an advertisement for a reusable water bottle.
Output	Stay hydrated with our reusable water bottle. It is durable, convenient, and eco-friendly. Carry it anywhere and reduce plastic waste.
Creative Prompt	Act as a modern advertising copywriter. Create 3 short advertisement variants for a reusable water bottle designed for college students. Each variant should have a catchy headline, one-line description, and call-to-action . Use three different tones: funny, energetic, and eco-

	conscious. Keep each variant under 40 words.
Output	Variant 1 – Funny: Headline: “Your Bottle Deserves a Comeback!” Description: Stop buying plastic bottles like it’s a daily subscription. Carry your reusable bottle and stay hydrated in style. CTA: Refill. Reuse. Repeat! Variant 2 – Energetic: Headline: “Hydrate. Move. Conquer.” Description: Built for busy students, this reusable bottle keeps you refreshed from the classroom to the gym. CTA: Grab yours and get moving! Variant 3 – Eco-conscious: Headline: “One Bottle. Less Plastic.” Description: Make every refill count. Choose a reusable bottle and take one simple step toward reducing everyday plastic waste. CTA: Refill for a greener tomorrow.

Analysis: The basic prompt generates a generic advertisement without a defined audience or style. The creative prompt assigns a professional persona, specifies the target users, output structure, word limit, and three different tones. As a result, the model produces distinct variations that are more engaging and suitable for marketing.

Key Learnings from Task 02

- **Prompt Structure Matters** – A well-structured prompt helps the AI organize creative ideas into a useful format.
- **Tone Influences Creativity** – Words such as funny, energetic, mysterious, or professional can significantly change the style of the output.
- **Persona Guides the Model** – Assigning a role such as “startup strategist,” “fiction writer,” or “advertising copywriter” helps the model produce domain-specific content.
- **Few-Shot Prompting** – Providing a short example helps the model understand the expected writing style without directly copying the example.
- **Constraints Improve Creativity** – Word limits, target audiences, required sections, and specific features can make creative outputs more focused.

- **Multiple Variants Increase Options** – Asking for different versions allows comparison and helps identify the tone and style that works best.

Conclusion

This task demonstrates that prompt engineering can be used not only to obtain factual answers but also to guide AI toward creative and original outputs. By using personas, examples, tone instructions, structured requirements, and constraints, the model can generate more diverse, engaging, and relevant content. Experimenting with different prompt variations helps users understand how small changes in instructions can influence AI creativity.
